

Martins Global Travels - Staff Dashboard Guide (for Jeanie)

Hi Jeanie - this guide walks you through your employee dashboard step by step. No coding, no Supabase, no technical setup. Bookmark this page and use it whenever you add a client or check a balance.

What you have (two links)

Who uses it	Link	What it does
You (staff)	https://martinsglobaltravel.com/admin.html	Add clients, set balances, write private n
Your travelers (clients)	https://martinsglobaltravel.com/portal.htm	Sign in, see what they owe, pay by card

Important: Keep admin.html private - bookmark it on your computer or phone. Do not put it on the public website or social media. Only you and trusted staff should have the link and the staff password.

Clients find the portal from the main site menu: Client Portal.

Part 1 - Signing in to your dashboard

- 1. Open <https://martinsglobaltravel.com/admin.html>
- 2. You will see "Manage clients" and a box that says Staff sign in
- 3. Enter your staff password (the one your web person set up for you - only for this page, not your email password)
- 4. Click Continue

You stay signed in until you close the browser tab or click Sign out at the bottom.

If it says the password is wrong, double-check caps lock or contact your web person to confirm the staff password in Netlify.

Part 2 - The three tabs (your main tools)

After you sign in, you see three tabs at the top:

Tab	What it's for
Add client	Create a new traveler login + set what the
Client list	See everyone, write notes, quick actions
Update balance	Change how much one person owes

Green or gold messages at the top tell you if something saved successfully. Red messages mean something needs to be fixed (wrong email, missing field, etc.).

Part 3 - Add a new client (step by step)

Use this when someone new needs portal access.

- 1. Click the Add client tab (usually already open after login)
- 2. Fill in every field:

Field	What to enter
First name	Client's first name
Last name	Client's last name

Email	Their login email (they will use this ever
Temporary password	A password you make up (example: Welcome20
Balance owed (\$)	How much they owe in dollars - example:

- 3. Click Save client
- 4. You should see a success message with their name

What to tell the client

Send them something like this (by email or text):

Hi [Name],

You can view your travel balance and pay online here:

<https://martinsglobaltravel.com/portal.html>

Email: [their email]

Temporary password: [the password you set]

The first time you sign in, the site will ask you to create your own new password. After that, use your new password going forward.

If you forget your password, click Forgot password? on the login page.

About temporary passwords

- The password you set is one-time / temporary
- The first time they log in, a popup forces them to pick a new password
- If you update their password in Add client (same email again), they will be asked to change it again on next login

Part 4 - Client list (see everyone + notes)

- 1. Click the Client list tab
- 2. You see a table: Name, Email, Balance owed
- 3. The top right shows how many clients you have and a Refresh button (use after payments or changes)

Open a client (dropdown)

- 1. Click anywhere on their row (name, email, or balance)
- 2. The row expands downward with:
 - Staff notes - a text box for your eyes only (clients never see this)
 - Save notes - saves trip details, reminders, preferences, etc.
 - Update balance - jumps you to change what they owe (email filled in)
- 3. Click the same row again to collapse it

Example notes you might write

- "Honeymoon - Maldives, June 2026"
- "Called 3/15 - paying half next week"
- "Prefers email only"

After a client pays online

- 1. Go to Client list
- 2. Click Refresh
- 3. Their Balance owed should be \$0.00 (or lower if they paid part - full balance is paid in one checkout)

Part 5 - Update balance only

Use this when someone's amount owed changes (new invoice, partial plan, correction).

Option A - from Client list

- 1. Client list -> click the client -> Update balance in the dropdown

Option B - Update balance tab

- 1. Click Update balance tab
- 2. Enter Client email
- 3. Enter New balance owed (\$) in dollars - example: 1500 for \$1,500
- 4. Click Update balance

The client will see the new amount the next time they open the portal (or refresh the page).

Part 6 - What your clients see (so you know)

You don't use this page for daily work, but it helps to know what they experience:

- 1. They go to portal.html (or Client Portal on the main site)
- 2. Sign in with email + password
- 3. First login: popup - "Create your password" (required)
- 4. They see:
 - A greeting with their name
 - Balance owed (only their balance - nobody else's)
 - Pay balance with card (secure Stripe checkout)
- 5. Forgot password? on login - they get an email reset link
- 6. Change password - button on their dashboard after login

They cannot see your staff notes or other clients.

Part 7 - Typical day-to-day workflow

New booking / new client owes money

- 1. admin.html -> Add client
- 2. Send them portal link + email + temporary password
- 3. They log in, set their own password, see balance, pay when ready

Client paid you outside the portal (check, wire, etc.)

- 1. admin.html -> Update balance -> set balance to 0 or the new remaining amount

Client paid on the portal with a card

- 1. Client list -> Refresh -> confirm balance updated
- 2. Optional: add a note ("Paid in full 3/20 via portal")

You need to remember something about a trip

- 1. Client list -> click client -> write in Staff notes -> Save notes

Client forgot password

- Tell them: Forgot password? on portal.html, enter email, check inbox
- Or: Add client tab, same email + new temporary password -> they must change it on next login

Part 8 - Sign out

When you're done on a shared computer:

- 1. Scroll to the bottom
- 2. Click Sign out

Quick reference card (print or save)

STAFF DASHBOARD

https

If something doesn't work

Problem	What to try
Can't sign in to admin	Check staff password; contact web person
Client can't sign in	Confirm email/password; try new temp passw
Balance wrong after card pay	Client list -> Refresh; wait 1 minute; con
Notes won't save	Contact web person (database column may ne
Client didn't get reset email	Check spam; confirm correct email on accou

Need technical help?

Contact whoever manages the website / Netlify / Stripe setup. You do not need to log into Supabase or Stripe for normal daily client management - admin.html is your only tool for that.
